[Department of Computer Science and Engineering (Master of Computer Applications)]

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
(Autonomous Institute Affiliated to University of Mumbai)
Master of Computer Applications

Effective from Academic Year 2026-2027

Batch 2026 - 2028

Board of Studies Approval :

Academic Council Approval :

Dr. Dhananjay Kalbande
HOD, CSE-MCA

Dr. Reena Sonkusare
Dean Academics

Dr. B.N. Chaudhari
Principal

Bharatiya Vidya Bhavan's

MCA PROGRAM AT SPIT: 2026 ITERATION

Salient Features

- 80 Credits Education Model for Computer/IT Graduates and Non-Computer/IT Graduates.
- A strong program core of 6 courses, 3 baskets of Thread Electives, 8 Program Electives, 9 skilled-based courses to ensure breadth and depth in a chosen domain of studies.
- Credit-based 6-Month Industry Internship.
- One year Major Project.
- Summer Term for Interview Preparation.
- Aggressive model of “Learning by Doing”.
- Open courses like Finance, Law, Psychology, and Economics are offered to have a multidisciplinary approach in learning.
- Provision to earn credits against Open Electives through MOOC Courses.
- Provision to earn credits through bridge courses for Non-Computer / IT Graduates.

This curriculum aims at the development of an all-rounded personality. It follows a holistic approach of education, ensures mathematics foundation and program core, develops expertise in domain verticals through sequel of electives and HSSE courses.

SEMESTER – I

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
 (Empowered Autonomous Institute Affiliated to University of Mumbai)
 [Knowledge is Nectar]
 [Department of Computer Science and Engineering (Master of Computer Applications)]

Course (Category) Code	Course Name	Teaching Scheme (Hrs/week)					Credits Assigned			
		L	T	P	SE	TE	L	T	P	Total
BSC	Linear Algebra	2	1	0	5	8	2	1	0	3
		Examination Scheme								
		Component		ISE		MSE		ESE		Total
		Theory		20		20		60		100
MA501		Laboratory		--		--		--		--

Pre-requisite Course Codes, if any.		Basics of Mathematics
Course Objective: To develop the ability to apply concepts of matrices, vector spaces for solving mathematical and engineering problems.		
Course Outcomes (CO): At the End of the course students will be able to		
MA501.1	Identify types of matrices, find row echelon form, reduced row echelon form, and rank of a matrix.	
MA501.2	Apply direct and iterative numerical techniques to obtain solutions of systems of linear algebraic equations and interpret their computational efficiency.	
MA501.3	Identify whether given structures are vector spaces and subspaces and construct a basis for them.	
MA501.4	Solve equations in real life problems and to encode and decode messages using the concept of matrices.	
MA501.5	Examine the eigenstructure of a matrix to determine its diagonalizability and construct its diagonal representation whenever possible.	

CO-PO/PSO Correlation Matrix (3-Strong, 2-Moderate, 1-Weak Correlation)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PSO1	PSO2
MA501.1	3	-	-	-	-	-	-	-	-	-
MA501.2	2	1	-	-	-	-	-	-	1	-
MA501.3	2	1	-	-	-	-	-	-	1	-
MA501.4	3	-	-	-	-	-	-	-	-	-
MA501.5	3	-	-	-	-	-	-	-	-	-

BLOOM'S Levels Targeted

Remember	Understand	Apply ✓	Analyze	Evaluate	Create
----------	------------	---------	---------	----------	--------

Theory Component:

Module No.	Topics	Ref.	Hrs.
1.	Basics of Matrices & System of Linear Algebraic Equations	1,2,3,4	03
	Revision of basics of matrices and types of matrices, Row echelon form, Reduced Row Echelon form, Rank of a matrix.		
2.	System of Linear Algebraic Equations & its Solution	1,2,3,4	04
	Consistency and solution of simultaneous linear homogeneous and non-homogeneous equations. Solution of system of linear algebraic equations, by (1) Gauss Elimination Method (2) Gauss Jordan method (3) Gauss Jacobi Iteration method (4) Gauss Seidel Method.		
3.	Vector Spaces (over field of real numbers)	1,2,3,4	08
	Vector space, subspace with examples, linear span, linear dependence and linear independence of vectors, basis of vector space, dimension of vector space, Null space, Row space, Column space, Rank-Nullity theorem (only statement with examples). Orthogonal Projection & Gram-Schmidt Process of orthogonalization.		
4.	Application of Matrices	1,2,3,4	05
	Study of Modular Arithmetic & Implementation of the Hill Cipher method to encode & decode the messages using matrices. Application of matrices in traffic control.		
	Eigenvalues and Eigenvectors		

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
 (Empowered Autonomous Institute Affiliated to University of Mumbai)
 [Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

5.	Eigenvalues, Eigenvectors and its properties, Cayley Hamilton Theorem and its applications, Diagonalisation of matrices, Singular Value Decomposition, Functions of a square matrix using diagonalization, Solving system of differential equations using diagonalisation.	1,2,3,4	08
6.	Self Study Forming equations using KVL for circuits and solving them using matrices. Least square method. PAQ form. Additional properties with proofs of eigenvalues and eigenvectors.		5*
Total			28

Tutorial Components:

Sr. No.	Title of the Tutorial
1	Row Echelon Form (REF), Reduced Row Echelon Form (RREF) and Rank of a Matrix
2	Solution of Linear Systems using Gauss Elimination and Gauss–Jordan Methods
3	Solution of Linear Systems using Gauss–Jacobi and Gauss–Seidel Iterative Methods
4	Vector Spaces, Subspaces, Linear Dependence/Independence, Basis and Dimension
5	Null Space, Row Space, Column Space and Applications of the Rank–Nullity Theorem
6	Orthogonal Projection and Gram–Schmidt Orthogonalization Process
7	Applications of Matrices: Hill Cipher and Traffic Control Problems
8	Eigenvalues, Eigenvectors and Applications of the Cayley–Hamilton Theorem
9	Diagonalization, Singular Value Decomposition (SVD) and Functions of Square Matrices
10	Solving Systems of Differential Equations using Diagonalization

Theory Component

Module No.	Topics	Ref.	Hrs.
1	Introduction to Data Structure and Algorithms	1,2	2
	Types of Data Structure, Characteristics of an Algorithm, Abstract Data type (ADT)		
2	Linked List, Stack and Queue	1,2	13
	Linked List (Linked List as an ADT, Linked List Vs. Arrays, Types of Linked List: Singly, Doubly, Circular , Operations of Linked List (Insert, delete, traverse, count, search), Application of Linked List: Polynomial addition and Subtraction) Stack (The Stack as an ADT, Stack operations, Array and Linked list Representation of Stack, Application of stack – Evaluation of Postfix expression, Infix to Postfix expression conversion) Queue (The Queue as an ADT, Queue operations, Array and Linked Representation of Queue, Circular Queue, Priority Queue. Doubly Ended Queue, Application of Queues – Round Robin CPU Scheduling Algorithm)		
3	Tree and Graph	1,2	10
	Tree (Tree Definition and Terminologies, Binary Tree, Binary Search Tree, Expression tree, Huffman tree, AVL tree, B Tree, Heap tree) Graph (Graph Definition and Terminologies, Graph Representation, Graph Traversal Techniques)		
4	Searching and Hashing Techniques	1.2	9
	Searching : Sequential search, Binary search, Interpolation Search Hashing Techniques (Direct, Subtraction, Modulo Division, Mid square, Digit Extraction, Folding, Double hashing), Collision resolution techniques (Linear probe, Quadratic probe, Key offset, Chaining)		
5	Sorting Techniques	1.2	8
	Internal Sorting Techniques (Bubble sort, Insertion sort, Selection Sort, Radix Sort, Quick sort, Heap Sort), External Sorting Techniques (Merge Sort)		
6	Self-Study Topics		
	Applications of Linked list : Sparse Matrix and other real life applications, Applications of Stack : Recursion and other real life applications, Applications of Queue : Johnson’s Algorithm and other real life applications, Applications of Tree, Applications of Graph, Competitive coding		
Total			42

(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

Sr. No	Title of the Experiment
1	Prepare Agile requirement using Scrum Lifecycle User Stories ,Epic
2	Prepare an SRS document.
3	Design Use Case diagram and prepare the specification
4	Design Activity and Sequence diagram with specification
5	Design the Implementation and environmental view diagram
6	Create Work Breakdown Structure and Plan for development using Gantt chart
7	Use of Agile Estimation Techniques
8	Prepare test cases and perform Unit Testing (test scenario, test cases, test data)
9	Using McCall's Quality Factors for Project
10	Study of continuous Integration and development tools.

Sr No	Title of Tutorial
-------	-------------------

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
 (Empowered Autonomous Institute Affiliated to University of Mumbai)
 [Knowledge is Nectar]
 [Department of Computer Science and Engineering (Master of Computer Applications)]

1	To study UI components of HTML File
2	To study different types of CSS and JavaScript
3	To study different types of SASS and JavaScript
4	To combine HTML,CSS and Javascript for a given project
5	To study basics of React and its dependencies
6	To study lifecycle of react and JSX
7	To study Components in React
8	To study Props in React
9	To study Hooks in React
10	To study Routing in react
11	To study Routing in react
12	To study API Calls in react
13	To understand state management in react
14	To understand state management in react

Laboratory Component

Sr. No.	Experiment Details	Ref.
1	Write a basic program using HTML and CSS.	1
2	Create a sample form program that collects the first name, last name, email, user id, and password and confirms password from the user. All the inputs are mandatory and email address entered should be in correct format. Also, the values entered in the password and confirm password textboxes should be the same. After validating using JavaScript, In output display proper error messages in red color just next to the textbox where there is an error.	1
3	Build a dynamic website using HTML,CSS and Javascript	1,7
4	Create and run the application using basic concepts of react	2,3,5,6
5	Create an application using Props and States.	2,3,5,6
6	Create an application using React Form by applying form component, submit and reset theform and validate the form,	5,6
7	Create a single page application. Apply Routing, Dynamically render the components basedonthe URL.	5,6
8	Create an application that demonstrates Hooks	5,6
9	Miniproject based on all the concepts	5,6
10

Module No.	Topics	Ref.	Hrs.
1.	Basics of Matrices & System of Linear Algebraic Equations	1,2,3,4	03
	Revision of basics of matrices and types of matrices, Row echelon form, Reduced Row Echelon form, Rank of a matrix.		
2.	System of Linear Algebraic Equations & its Solution	1,2,3,4	04
	Consistency and solution of simultaneous linear homogeneous and non-homogeneous equations. Solution of system of linear algebraic equations, by (1) Gauss Elimination Method (2) Gauss Jordan method (3) Gauss Jacobi Iteration method (4) Gauss Seidel Method.		
3.	Vector Spaces (over field of real numbers)	1,2,3,4	08
	Vector space, subspace with examples, linear span, linear dependence and linear independence of vectors, basis of vector space, dimension of vector space, Null space, Row space, Column space, Rank-Nullity theorem (only statement with examples). Orthogonal Projection & Gram-Schmidt Process of orthogonalization.		
4.	Application of Matrices	1,2,3,4	05
	Study of Modular Arithmetic & Implementation of the Hill Cipher method to encode & decode the messages using matrices. Application of matrices in traffic control.		
5.	Eigenvalues and Eigenvectors	1,2,3,4	08

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
 (Empowered Autonomous Institute Affiliated to University of Mumbai)
 [Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

	Eigenvalues, Eigenvectors and its properties, Cayley Hamilton Theorem and its applications, Diagonalisation of matrices, Singular Value Decomposition, Functions of a square matrix using diagonalization, Solving system of differential equations using diagonalisation.		
6.	Set Theory and Logic	5, 6, 7	12
	Finite and infinite set, Union, Intersection, Disjoint, and Difference of two sets. Power Set, Ordered Sets, De Morgan’s Laws, Inclusion Exclusion Principle. Predicates, Propositions, Conditional Propositions, Logical Connectivity, Proposition calculus, Universal and Existential Quantifiers, Well-ordering principle.		
7.	Relations and Functions	5, 6, 7	10
	Product Sets and Partitions, Properties of Relations, Equivalence Relations, Operations on Relations, Composition of Functions, Pigeon hole Principle.		
8.	Graph Theory	5, 6, 7	06
	Concepts and terminologies, Graphs as Model (Konigsberg Bridge Problem), Matrices, Isomorphism, Bipartite Graphs, Directed Graphs.		
9.	Self-Study Topics		05*
	Least square method. Additional properties with proofs of eigenvalues and eigenvectors. Algebraic Structures - Semi group, Monoids, Groups, Cyclic groups, Abelian groups, Normal Subgroups

Pre-requisite Course Codes, if any.	Data Structures
Course Objective: To develop the ability to analyze and evaluate the time and space complexity of various algorithms. To decompose a problem into simpler sub problems and solve them effectively. To provide an optimum solution for a range of computational problems.	
Course Outcomes (CO): <i>At the End of the course students will be able to</i>	
MC507.1	Analyze time and space complexity of different algorithms.
MC507.2	Analyze various divide & conquer algorithms.
MC507.3	Apply greedy and dynamic method to given problem.
MC507.4	Make use of backtracking, branch and bound techniques, graphs to solve a problem.

Laboratory Component

Sr. No.	Title of the Experiment
1	Design and develop graphical user interface (GUI) applications using Java AWT components, event handling, and layout managers.
2	Develop dynamic web applications using Java Servlets to process client requests, manage responses, and implement business logic for real-world scenarios.
3	Design dynamic web pages using JavaServer Pages (JSP) with standard directives, scripting elements, and reusable components for web application development.
4	Implement session management techniques in JSP-based web applications to maintain user-specific information across multiple requests.
5	Develop web applications demonstrating client-side state management using Cookies and related mechanisms in JSP applications.
6	Develop database-driven web applications integrating Servlets, JSP, and JDBC to perform data storage, retrieval, validation, and reporting operations.
7	Develop enterprise applications using the Spring Framework and Spring Boot, demonstrating dependency injection, configuration, and application architecture concepts.
8	Design and develop RESTful web services using Spring Boot, implementing CRUD operations, request handling, validation, and response management.
9	Design and implement a Microservices-based application using Spring Boot, demonstrating service decomposition, inter-service communication, and API integration.
10	Mini Project: Design and develop a full-stack enterprise web application using Spring Boot demonstrating user management, authentication, CRUD operations, database integration, and deployment-ready architecture.

Note: Course Supervisor may consider a single case study for implementing above programs.

Course Objective: This course inculcates self-learning, research and entrepreneurship attitude in students. It aims to sharpen problem solving skills for societal benefits by solving real world problems. Students will be able to understand the formal project development process to complete aproject in a team. It will help students to develop communication, organizational skills and maturity through discussion, presentation etc.										
MC601.1	Identify and analyze project objectives, scope, and constraints through literature surveys, stakeholder discussions, and technical feasibility studies.									
MC601.2	Formulate clear and structured Problem Statements by breaking down complex challenges into manageable tasks and sub-tasks.									
MC601.3	Develop Preliminary Design Concepts									
MC601.4	Perform Data Collection and Analysis									
MC601.5	Document and communicate the project’s background, approach, and expected outcomes through written proposals, oral presentations, or progress reviews.

----------	------------	-------	---------	----------	---------

Major Project- I is an opportunity to inculcate the research aptitude in students. It helps them to identify research gaps and come up with possible solutions. Students should be able to analyze these solutions for feasibility of their implementation. Major Project- I is based on a small research project correlating scientific knowledge and day to day experience which encourages research inclination among the students to solve societal problems.

Steps for Research:

- (5) Keen observation of the surrounding/society
- (6) Read existing Literature to understand and identify the research gaps
- (7) Analysis of the problem
- (8) Formulation of the problem statement
- (9) Collection of relevant information by formulating research questions
- (10) Suggesting plan of action
- (11) Conducting experiments and draw conclusion
- (12) To find the possible solution to rectify the problem
- (13) To execute experiments and remedial measures wherever possible
- (14) To publish results

Students can seek guidance from teachers, other experts and make effective use of other sources of information available around them. Students must ensure that the problem is manageable in one semester.

Criteria of a good project:

- Appropriate idea, clear understanding, and proper presentation of the concept
- Quality of work
- Project plan and its execution
- Credibility of the work
- Probable impact of the work on the attitude of students and society
- Scientific attitude, creativity and novelty reflected in project work and analysis of the situation
- Utility and innovation of the remedial measures
- Desirability, Feasibility and Viability in real life

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]
[Department of Computer Science and Engineering (Master of Computer Applications)]

The H/W and S/W resources required to complete the Major Project- I may be beyond the scope of curriculum of courses taken or may be based on the courses but thrust should be on

- ✓ Learning additional skills
- ✓ Development of ability to define and design the problem and lead to its accomplishment with proper planning
- ✓ Learn behavioral discipline. Students should function effectively as an individual

Evaluation:

Major Project- I report shall be submitted in a PDF copy. Other sections of the report shall be decided by the mentor based on projects. But it must have introduction, necessity of project, objectives, hypothesis, plan, observations, and analysis of results, conclusion, and references along with other sections related to technology.

The ISE(Phase I and Phase II) and ESE evaluation will be carried out based on the rubrics framed by the Department. ISE marks will be based on the performance of the individual student in the evaluation. The ESE marks will be based on demonstration in front of the expert appointed by the Department. In the ESE examination each individual student would be assessed for her contribution in selecting the originality of the problem statement, understanding and knowledge gained about the task completed through presentation/demonstration, work done, and preparing the technical report/presentations/poster/technical paper of the project in the standard format provided by the Department.

Following Parameters are evaluated during ISE(Phase I and Phase II) and ESE by project guide and external expert.

- P1: Problem Identification & Literature Survey (Problem Definition/Idea/Originality/Scope & objectives/Feasibility/Application in Society/ Gap identification/Relevance of references/Adequate references)
- P2: Analysis & Design (UML diagrams: Use case, Class, and Sequence diagram/Block diagram/Algorithms)
- P3: Implementation (work done up to 25 %)
- P4: Presentation (Coverage of topic/use of graphics/Delivery & Speaking skills) and Ethics (Attitude/Deadline/Distribution of Work)
- P5: Social Relevance

Course Objective: This course prepares students for campus placements and professional life through structured mock interviews and, group discussions, spoken English, and workplace etiquettes.										
Course Outcomes (CO): <i>At the End of the course, students will be able to</i>										
AS602.1				Demonstrate effective professional communication skills in English for academic and workplace contexts, including self-introduction, interviews, and group discussions						
AS602.2				Develop and present an ATS-friendly resume and an optimised LinkedIn profile that effectively communicate professional qualifications and career competencies						
AS602.3				Apply appropriate interview skills, including responses to HR and basic technical questions, confident verbal communication, positive body language, and professional etiquette						
AS602.4				Demonstrate an understanding of workplace expectations, professional behaviour, and communication practices relevant to the software industry

MC511		Laboratory		50		--		50		100

Pre-requisite Course Codes, if any.		
Course Objective: This course provides an opportunity to learn and apply the design principles of Human Machine Interaction. Learners will learn the basic human psychology of everyday actions and will be able to design an UI prototype of an application. This course covers the discussion on various interaction design concepts. The laboratory experiments are designed to practice the concepts and to adopt the systematic approach for interface design using various UX tools.		
Course Outcomes (CO): <i>At the End of the course students will be able to</i>		
MC511.1	Identify the various design principles used for interacting between human and machine.	
MC511.2	Apply human psychology of everyday actions and UI design processes for real world applications.	
MC511.3	Implement mobile, windows, and web-based application	
MC511.4	Evaluate and justify UI design	
MC511.5	Create an application for a social and technical task.	

CO-PO Correlation Matrix (3-Strong, 2-Moderate, 1-Weak Correlation)

		Mobile Ecosystem: Platforms, Application frameworks: Types of Mobile Applications: Widgets, Applications.		
Total				42

Laboratory Component, if any. (Minimum 10 Laboratory experiments are expected)

Sr. No	Title of the Experiment
1	To Study of open-source UX tools (Justinmind Prototype, Pidoco, Marvel ,Figma Prototype) and create a simple design for a given problem definition.
2	Know your client. - Design an app that can teach mathematics to children of 4-5 years age in schools in Rural Sector. - Design an app that can teach mathematics to children of 4-5 years age in schools in Urban Sector. - Design a site that can help people to sell their handmade products in metro cities. - Design a site that can connect housewives and keep them engaged. Note : Students should be able to do the following for any given problem statement - Analysis of user's/client's behavior eg their preferences, interests etc - What kind of interfaces will they like and why? - Existing apps - analyze and rate them. - What will be your choice of screen elements? - How will your app/web design be better than the existing one?
3	Goal-oriented design - Design an experience for passengers whose flight /train is delayed.
4	Design Principles - Understand principles of good UI design by heuristic evaluation. Design UI for a given problem statement.
5	Menus & Navigation – Redesign of a user interface (Suggest and implement changes in Existing User Interface) for a given problem statement.
6	Windows & Screen controls – Design UI for a given problem statement. - Design a navigator for a student new in your Institute. - Design a navigator for a person new in tourist city/ village. - Motor paralysis for differently able people. - Vaccination App design with localization
7	Icons - Design appropriate icons pertaining to a given domain. (Eg. Greeting cards, Travelling, restaurants, Education, Medical, security at Airport, Malls etc)
8	Colors – Design a personal website for any socio-technical problem. Use color guidelines with statistical graphics for better visualization.
9	Design a Map-based UI(Web User) for the given problem statement. Example: Mumbai Dabbawallas with localization feature. Pet Care

Course Objective: This course inculcates self-learning, research, and entrepreneurship attitude in students. It aims to sharpen problem solving skills and application development by taking up real world problems. Students will be able to understand the formal project development process to complete a project in a team. It will help students to develop communication, organizational skills and maturity through discussions, presentations etc. Students will be able to write technical research paper.	
MC602.1	Apply Advanced Technical Knowledge to solve real-world problems within the project scope.
MC602.2	Design, develop, and implement effective solutions by integrating multidisciplinary approaches
MC602.3	Test prototypical solution using advanced tools
MC602.4	Develop effective interpersonal and communication skills in project development.
MC602.5	Understand professional, ethical, legal, industry practices and responsibilities.

[Department of Computer Science and Engineering (Master of Computer Applications)]

Major Project - II is an opportunity to inculcate problem solving aptitude in students. It helps them to identify requirements and come up with feasible solutions. Students should be able to analyze these solutions for feasibility of their implementation. Major Project - II is based on an application development project correlating industry practices, tools and methodologies and day to day experience which encourages development of interpersonal skills among students to solve real life problems.

Steps for Project:

- ✓ Keen observation of the surrounding/society
- ✓ Read existing Literature to understand and identify the research gaps
- ✓ Analysis and formulation of the problem
- ✓ Design/ Develop the solution
- ✓ Conducting experiments and draw conclusion
- ✓ Perform testing by creating test cases
- ✓ Prepare the documentation in each phases
- ✓ Submit the final project report

Students can seek guidance from teachers, other experts and make effective use of other sources of information available around them. Students must ensure that the problem is manageable in one semester.

Criteria of a good project:

- ✓ Appropriate idea, clear understanding, and proper presentation of the concept
- ✓ Quality of work
- ✓ Project plan and its execution
- ✓ Credibility of the work
- ✓ Probable impact of the work on the attitude of students and society
- ✓ Scientific attitude, creativity and novelty reflected in project work and analysis of the situation
- ✓ Utility and innovation of the remedial measures
- ✓ Desirability, Feasibility and Viability in real life

The H/W and S/W resources required to complete the Major Project - II may be beyond the scope of curriculum of courses taken or may be based on the courses but thrust should be on

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

- ✓ Learning additional skills
- ✓ Development of ability to define and design the problem and lead to its accomplishment with proper planning
- ✓ Learn behavioral discipline by working in a team. Students should work in groups of three on Major Project - II

Evaluation:

Project report shall be submitted in a pdf copy. Other sections of the report shall be decided by the mentor based on projects. But it must have introduction, necessity of project, objectives, hypothesis, plan, observations, and analysis of results, conclusion, and references along with other sections related to technology.

The ISE(Phase I and Phase II) and ESE evaluation will be carried out based on the rubrics framed by the Department. ISE marks will be based on the performance of the individual student in the evaluation. The ESE marks will be based on demonstration in front of the expert appointed by the Department. In the ESE examination each individual student would be assessed for her contribution in selecting the originality of the problem statement, understanding and knowledge gained about the task completed through presentation/demonstration, work done, and preparing the technical report/poster/technical paper of the project in the standard format provided by the Department.

Following Parameters are evaluated during ISE(Phase I and Phase II) and ESE by project guide and external expert.

P1: Technical Competency (Understand project technicality/Design exceeds project objectives)

P2: Work done (100 % Implementation/ Meets project objectives/result analysis/test cases/solution shows originality)

P3: Presentation (Coverage of topic/use of graphics/Delivery & Speaking skills/Presentation length) and Ethics (Attitude/Deadline/Distribution of Work)

P4: Report (in latex)

P5: Research paper (in IEEE format with Plagiarism report)

Research Paper Publication and participation in Research / Project Competition is mandatory for Project II to earn the required credits.

MSE (Phase I): (First 3-Months Evaluation),
MSE (Phase II): (Next 3-Months Evaluation)

Guidelines:

1. Students need to select a company for an internship, or can work under the guidance of an internal mentor. If a student is not selected to work in industry for an internship project, an internal mentor needs to organize a project in the college itself which may be in accordance with Academic rules of the institute. Max. 3 students shall be allotted one internal mentor in case a student does not get an industry internship.
2. Every student should submit a joining letter along with their project proposal within 4 weeks of joining an internship in the company. Project proposal should include company information, External mentor information, project abstract and tool (tentatively) working.
3. Phase 1 and Phase 2 evaluation will be conducted as per the time table defined by the Internship coordinator.
4. Every student shall make a draft of a project report and get it accessed by an internal mentor. The Project report should contain an Introduction to Project, which should clearly explain the project scope in detail.
5. During evaluation faculty must follow the rubrics prepared for respective evaluation given by IR cell.

Figure 1: Process for calling internship through Faculty

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]
[Department of Computer Science and Engineering (Master of Computer Applications)]

Process for calling internship through IR cell/TPO , SPIT.

Figure 3.2 : Process for industry internship/summer training

Step1. IR CELL committee members/Faculty Coordinators send a request via mail to industries /Resource Person through TPO for providing the internship to students.

Step2. Once a response is received, a mail is forwarded to all the students regarding the internship offer containing the details about the subject domain, scope and project description and the same will be displayed on Notice Board (Industry Relation).

Step3. The IR CELL student committee collects the details of interested students from each department and prepares the list with areas of interest and skills.

Step4. The list is then forwarded to Industry and it is shortlisted by them.

Step5. The selected students are then called for a test and interview by respective companies.

Step 6. Industry offers appointments to selected students with terms and conditions and a copy of the same is kept with the IR cell and Faculty coordinators will send the copies of the selected students to other departments for departmental record.

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

An internship will be canceled during Internship period in case of any complaints about the Interns received from the Industry /Research Institute Personnel to Dean (IR). No students can avail the benefits of any kind of internship without prior approval and verification by the Dean (IR). A waiver in attendance will be granted only for the approved period of Internship. The Internship period will not be considered for getting the benefits in attendance marks.

		Laboratory		50		--		50		100
Pre-requisite Course Codes		Software Engineering								
Course Objectives	Total Experience Design (TXD) involves covering various aspects of design that consider the holistic user experience. This includes not only the interaction with products but also the entire journey of the user, including pre-use, use, and post-use experiences. This course provides an opportunity to learn and apply User experience design principles in day-to-day life. Learners will understand and identify the steps in the life cycle template of UX Design. The laboratory experiments are designed to practice the concepts and to adopt the systematic approach for gaining user experience via interface design using various UX tools. It also covers also covers Total experience design concept which is current buzz in the market.									
At the End of the course students will be able to										
Course Outcomes	MC515.1	Analyze the UX design life cycle and its process for users.								
	MC515.2	Evaluate the UX design process for the given scenario								
	MC515.3	Analyse the Total Experience Design process for users								
	MC515.4	Evaluate total experience design for the given scenario.

[Department of Computer Science and Engineering (Master of Computer Applications)]

	4.1	Introduction to Service Design, Designing for touchpoints and service ecosystems, Service blueprinting, Measuring and evaluating service experiences, Understanding emotional responses in design, Techniques for creating emotional connections , Ethical considerations in emotional and behavioral design, Principles of accessible design, Techniques for designing inclusive experiences.		8
5		Future Trends in Total Experience Design		8
	5.1	Emerging technologies and their impact on TXD (AR, VR, AI), The role of data and analytics in TXD, Sustainable design practices, The future of work and experience design.		
5		Self Study Topics		
	6.1	UX Method for Agile Development: Introduction, Basics of agile SE methods, drawbacks of agile SE methods from UX perspective.		
Total				42

Laboratory Component,

Sr. No.	Title of the Experiment
1	To Study of open source UX tools (Justinmind Prototype, Pidoco, Marvel Prototype) and create UX design for a given problem definition.
2	Design Mobile/Web UI for your own Travelling agent considering adding map and localization features along with descriptions if required. (e.g, Make my Trip, Tripadvisor, thrillophilia etc.). Use Figma's constraints and auto-layout features to make elements responsive.
3	Design a Map-based UI(Web User) for Mumbai Dabbawalas with localization feature.
4	Pick an app that you use on a daily basis (eg. facebook, gmail, whatsapp, zomato, etc). suggest improvements and create the heuristic report using Nielsen's Heuristic and accessibility tool (e.g., WAVE, Axe, Lighthouse)

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
 (Empowered Autonomous Institute Affiliated to University of Mumbai)
 [Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

	(15) Use accessibility tools to identify issues related to usability for people with disabilities. (16) Document findings and categorize them by severity. (17) Discuss in small groups how to address the identified issues. (18) Present recommendations for making the product more accessible.
5	Evaluate the accessibility of a digital product, suggest improvements and create the heuristic report using Nielsen's Heuristic and accessibility tool (e.g., WAVE, Axe, Lighthouse) [6] Choose a website to evaluate. [7] Use accessibility tools to identify issues related to usability for people with disabilities. [8] Document findings and categorize them by severity. [9] Discuss in small groups how to address the identified issues. [10] Present recommendations for making the product more accessible.
6	Design UI for students to teach mathematics in rural areas to students. Incorporate micro-interactions such as hover effects, loading animations, and transitions between screens.
7	Design UI for students to sell the products of farmers directly to consumers. Design reusable components (e.g., buttons, forms, cards) and organize them in the design system.
8	Analyze a product's emotional design elements and their impact on user experience. [10] Choose a product and identify its key emotional design elements (e.g., color scheme, shapes, interactions). [11] Analyze how these elements evoke emotions and contribute to the overall user experience. [12] Discuss in small groups how changing certain elements might alter the user's emotional response. [13] Present findings and suggest design improvements to enhance emotional engagement.

Bharatiya Vidya Bhavan's
Sardar Patel Institute of Technology
(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]

[Department of Computer Science and Engineering (Master of Computer Applications)]

9	Create a service blueprint to visualize the front-stage and back-stage processes of a service. (6) Choose a service to blueprint (e.g., dining experience at a restaurant). (7) Identify all touchpoints and interactions between the user and the service. (8) Map out the front-stage (customer-facing) activities and back-stage (behind-the-scenes) processes. (9) Use sticky notes to represent each touchpoint and process. (10) Discuss how the blueprint can help identify inefficiencies and opportunities for improvement.
10	Design UI for analysis of the number of children suffering from juvenile diabetic children in India. The design aims at providing solutions for improving quality treatment and making the treatment affordable.

Note: All the experiments need to be tested for usability. The problem statement for any experiment can be changed by the instructor during the laboratory with different examples.

(Empowered Autonomous Institute Affiliated to University of Mumbai)
[Knowledge is Nectar]
[Department of Computer Science and Engineering (Master of Computer Applications)]

Sr. No	Title of the Experiment
1	Implement Caesar cipher encryption-decryption
2	Implement Playfair cipher encryption-decryption
3	To implement Simple DES or AES
4	Implement Diffie- Hellman Key exchange Method.
5	Implement RSA encryption-decryption algorithm.
6	Write a program to generate SHA-1 hash.
7	Implement a digital signature algorithm.
8	Perform various encryption-decryption techniques with cryptool
9	Perform Email tracing using any open source tool
10	Study and use the Wireshark for the various network protocols.

Module No.	Unit No.	Topics	Ref.	Hrs.
1		Cyber offenses & Cybercrime: Issues and challenges	1,2,3	8
	1.1	Cybercrime definition and origins of the world		
	1.2	Classifications of cybercrime		
	1.3	How criminals plan the attacks, Social Engineering		
	1.4	Cyber stalking, Botnets,		
	1.5	Attack vector		
	1.6	Credit Card Frauds in Mobile and Wireless Computing Era		
	1.7	Attacks on Mobile/Cell Phones, Ransomware		
	1.8	Web Treats for Organizations: The Evils and Perils		
	1.9	Best practices with social media marketing tools		
2		Tools and Methods Used in Cybercrime	1,2	10
	2.1	Proxy Servers and Anonymizers		
	2.2	Password Cracking		
	2.3	Key loggers and Spywares		
	2.4	Virus and Worms		
	2.5	Steganography		
	2.6	DoS, DDoS Attacks		
	2.7	SQL Injection		
	2.8	Buffer Over Flow		
	2.9	Attacks on Wireless Networks		
	2.10	Phishing (Methods, Techniques, Countermeasures)		
	2.11	Identity Theft (Types, Techniques, Countermeasures)		
3		Cybercrimes and Cyber security	1,2,10	8
	3.1	The Legal Perspectives Why do we need Cyber law: The Indian Context		
	3.2	Positive and Weak areas of ITA 2000		
	3.3	Information Security Standard compliances: SOX, GLBA, HIPAA, ISO.		
	3.4	International Laws: E-Sign, CIPA and COPPA		
4		Understanding Computer Forensics	1,9	10
	4.1	Historical background of cyber forensic		
	4.2	Need for computer forensic		
	4.3	Cyber forensic and Digital Evidence, Forensic Analysis of E-mail		
	4.4	Digital Forensic life cycle.		

Bharatiya Vidya Bhavan's

[Department of Computer Science and Engineering (Master of Computer Applications)]

	4.5	Chain of custody, network forensic		
	4.6	Approaching a forensic Investigation		
	4.7	Computer Forensic and Steganography		
	4.8	Relevance of OSI 7 layer model to computer forensic		
	4.9	Forensic and social networking sites: The security/ privacy threats		
5		Forensics of Hand-held devices	1,8	6
	5.1	Mobile Phone Forensics, Printer and scanner forensics, Smartphone.		
	5.2	Challenges in Forensics of the digital Images and Still Camera.		
	5.3	Toolkits for Hand-Held Device Forensics(EnCase,Forensic card reader,MOBILedit)		
	5.4	Organizational Guidelines on Cell Phone Forensics.		
			Total	42

Laboratory Component

Sr. No	Title of the Experiment
1	Performing Man-in-the-Middle Attack using Wireshark & Ettercap.
2	Performing SQL injection and suggest its countermeasures. A. Manual SQL Injection, John the Ripper. B. Automate SQL Injection with Sql Map.
3	Demonstrate Password Cracking with Hashcat.
4	Demonstrate Social Engineering attack and suggest its countermeasures.
5	Demonstrate the use of nmap tool for the given scenario.
6	Implement steganography and suggest its countermeasures.
7	Demonstrate email spoofing and phishing attack and suggest its countermeasures.
8	Demonstrate to extract and analyze metadata from digital files.
9	Recover deleted files from a storage device.
10	Demonstrate and analyze E-mail forensics

Sr. No	Title of the Experiment
1	To implement a simple decision tree model for predicting whether a patient has diabetes based on their medical information. Note : students could implement decision trees using a dataset, visualize the decision tree, and explain the results
2	Feature Importance: To implement SHAP algorithm to calculate the feature importance on a given data set. Note:students could analyze a dataset and calculate the feature importance using an algorithm such as permutation importance or SHAP (SHapley Additive exPlanations), and explain the results.
3	Non linear relationship between features and predicted model: Interpretation and explanation of ML models [marginal effect of a single feature on the predicted outcome while holding all other features constant] To implement PDP(partial dependance plot) to calculate the feature importance on a given data set. Note: students could perform sensitivity analysis on a trained model to understand how the output varies with changes in the input features.
4	Non linear relationship between features and predicted model: Interpretation and explanation of ML models To implement ICE (Individual Conditional Expectation Plots) to calculate the feature importance on a given data set.[conditional effect of a single feature on the predicted outcome for each individual sample in a dataset] Note: students could perform sensitivity analysis on a trained model to understand how the output varies with changes in the input features.
5	To implement an IG algorithm for attributions analysis for a given problem statement.
6	To implement the XRAI algorithm for attributions analysis for a given problem statement.
7	To implement a grad-CAM method to generate class activation maps for a given problem statement.
8	Local Interpretable Model-agnostic methods: To implement LIME to explain the predictions of a given problem statement. Note: students could use model-agnostic methods such as LIME (Local Interpretable Model-Agnostic Explanations) or Anchors to explain the predictions of a machine learning model
9	To implement LIME to analyze text data, such as social media posts or customer reviews, and classify them into different categories.

Laboratory Component

Sr. No	Title of the Experiment
1	To design MP neuron for various problems
2	To design Perceptron Neural network
3	To design supervised NN model using BPN
4	Implement Union, Intersection, Complement and Difference operations on fuzzy sets.
5	To perform Union, Intersection and Complement operations To implement De-Morgan's Law.
6	To implement an unsupervised learning algorithm (KSOFM) for pattern classification problems.
7	To implement an unsupervised learning algorithm (LVQ) for pattern classification problems.
8	To design fuzzy controller
9	Implementation of Simple Genetic Application
10	Color recipe prediction using ANFIS
